

At SSI, we are always aiming to act responsibly to minimize our environmental impact. Our environmental management is divided into two main activities, the recycling of waste materials and pollution prevention.

Reduction of paper and consumables:

- One centralized printer for all departments, one for labels and one for confidential documents (accounting and HR)
- Digital storage of documents with internal and external backups
- Use of recycled and recyclable paper
- Recyclable waste management supplier
- Recycling of printer toners

Waste recycling:

- SSI's general waste includes paper, cardboard, plastic and office equipment
- Waste is sorted and separated by type
- SSI selects approved suppliers to manage the recovery and recycling of waste
- Office equipment is maintained by the supplier who recovers it for recycling once empty or used
- Manufactured parts are entrusted to approved recyclers and/or refurbished for reuse in emergency situations before being replaced

Energy saving:

- Office equipment is on automatic standby mode
- Lighting and air conditioning are optimized to reduce energy consumption, e.g. energy-efficient light bulbs and two-channel air distribution systems instead of four
